sense and simplicity

TrueBlue

- Effective
- Appealing
- Comfortable

The mask is a crucial determinant of Positive Airway Pressure (PAP) treatment acceptance. Common reasons for non-adherence include pressure intolerance and issues related to the mask, such as facial discomfort, skin injury, and significant air leaks.¹

The **TrueBlue** mask combines the best-in-class gel material and Auto Seal technology to allow for an immediate seal with fewer adjustments.

TrueBlue: Truly Revolutionary.

Effective

EZ Peel tabs allow for quick, easy fitting and adjustment

The original **TrueBlue** headgear has inlaid adjustable straps that converge into a single back panel with a crown strap for added stability, extra comfort and free movement.

A **snap-on clip** at each side allows for simple fitting night after night without unnecessary adjustments.

Angled exhalation micro ports make performance quieter and redirect air away from the bed partner.

The faceplate's **bellows design** follows the patient's movement during sleep, providing good stability throughout the night.

Appealing

The **TrueBlue** mask's low profile design decreases overall footprint and face coverage.

The touch and feel of the **TrueBlue** mask is extremely soft and pleasant.

The **TrueBlue** clear polycarbonate frame improves the patient's line of sight.

Comfortable

Traditional mask design is known to create uncomfortable pressure points.

The silicone spring, gel cushion and silicone membrane of **TrueBlue** create a system that yields greater comfort.

TrueBlue gel helps prevent leaks by better conforming to the bone structure and contour of the face.

Our **premium blue gel** provides extra stability and is thinner and lighter than ever before.

The ultra-thin, form-fitting outer support **silicone membrane** creates an effective, self-adjusting, leak-free seal.
